

Trip to Waren-Müritz for the international students

It was a shy beginning of the day because at first the weather was not so promising but we started the trip with the usual meeting point for our group. However our attitude was full of enthusiasm and once we took the train and we headed to Waren we realized that we were about to have a memorable day.

After our arrival in the city of Waren (Müritz) we meet with our guide and started the tour of the city. During the tour we learned interesting things about the city. We were impressed by the architecture of the old city with beautiful squares and the all around present churches with a long past. Marien Kirche is one of the oldest churches and with a height of 50 m is also one of the highest buildings in town.

One of the most attractive locations that we have visited was the promenade on lake Müritz, an imposing place for tourist or guest which arrive here and can see the beautiful lake with a small harbor and a view of the old city. We have find out that from the lakes it is possible to navigate in almost any corner of the Europe because the lakes and channel are interconnected.

After the city tour our brave group of students adventured to a wonderful journey with canoe boats on lake Muriz. “By the virtue of the glorious sailors which have discovered the new territories” we rowed with joy on the lake.

Albeit some of us were initiates in the water sports and we needed to accommodate a little with the boats, others were born sailors going either fast as possible and competing for the first position or just relaxing and enjoying the scenery and sometimes being saluted during our endeavor by the passing by ships. But overall everyone succeed to make the trip and that we had a great time traveling on the lake and the channels benefiting from a great afternoon on the lake Müritz.

We will definitely remember this trip as one of the most exciting adventures which have happened in our summer semester at the FH-Stralsund.
